NOTE:
The student is required to make seminar presentation(s) of the results achieved before the submission of the thesis.

1. The Post Graduate Student Research Committee (PGRC) of the Institute will evaluate the Thesis. The constitution of the committee is as under:
   a. Chairperson of the institute
   b. Senior professor of the institute
   c. Supervisor(s)
   d. External examiner

2. The PGRC will evaluate the final thesis based on an open house presentation by the student, which will be attended by the faculty members, PG students and other research scholars of the institute.

3. No marks are assigned to Preliminary Thesis and Thesis evaluation work. On successful completion and presentation of Research Seminars, the candidate will be awarded ‘S’ grade i.e. satisfactory or else ‘X’ grade i.e. unsatisfactory.

4. Requirement for the award of M.E. in Chemical Engineering degree is 75 credits with minimum CGPA of 6.0 and successful completion of thesis work.
SYLLABUS FOR
M. E. (CHEMICAL ENGINEERING)
FIRST SEMESTER

Paper Title: MATHEMATICAL METHODS IN CHEMICAL ENGINEERING (Theory)
Paper Code: CHE 1.1  Max. Marks: 50  Credits: 4  Time: 3 hours
Course Duration: 45 Lectures of one hour each.
Note for the Paper setter: The question paper should be divided into Section A and Section B Total of 8 questions. 4 questions from section A and 4 questions from section B are to be set. The students will be required to attempt 5 questions selecting at least 2 from each section.

SECTION-A

Integral Functions: Gamma functions, Beta functions, Elliptic integrals and functions and error functions.

SECTION-B

Solution methods for linear difference equations, complementary solutions and particular solutions. Nonlinear equations (Riccatian equations).

Z-Transforms: Introduction, some standard Z-transforms, linearity property damping rule, some standard results, shifting rules, initial and final value theorems, convolution theorem, evaluation of inverse transforms, applications to difference equations.

Books Recommended:

Paper Title: ADVANCED FLUID MECHANICS (Theory)
Paper Code: CHE 1.2  Max. Marks: 50  Credits: 4  Time: 3 hours
Course Duration: 45 Lectures of one hour each.
Note for the Paper setter: The question paper should be divided into Section A and Section B Total of 8 questions. 4 questions from section A and 4 questions from section B are to be set. The students will be required to attempt 5 questions selecting at least 2 from each section.

SECTION-A

Dimensional Analysis: Buckingham, Pi-theorem, Rayleigh method, geometric, kinematic and dynamic similarity, scale up numerical problems on pumps, drag force and agitation.
Differential Equations of fluid flow: Continuity equation for one dimensional and three dimensional flows. Derivation of momentum equation for three dimensional flow in Cartesian coordinates.

Flow of non-viscous flows: Equation of motion (Euler equation) and its integration to obtain Bernoulli equation, velocity potential and irrotational flow. Streamlines and stream functions for two dimensional incompressible flow, two dimensional irrotational flow and flow net.

SECTION-B

Turbulent flow of viscous fluids: Prandtl’s mixing length theory, Reynolds equation for in compressible turbulent flow. Reynolds stresses, statistical theory of turbulence, intensity of turbulence, scale of turbulence, measurement of turbulence, hot wire anemometer and its use in turbulence parameters, isotropic and homogeneous turbulence.

Turbulent flow in closed conduits: Prandtl’s power law of velocity distribution, logarithmic and universal velocity distribution equations for turbulent flow in smooth tubes. Friction factor for rough and smooth tubes, relationship of $u^+$ and $y^+$ to the friction factor and Reynolds number.

Flow of incompressible fluids past immersed bodies: Von-Karman integral momentum equation, boundary layer on immersed bodies, equation of two dimensional flow in the boundary layer, local and total drag coefficients. Transition from laminar to turbulent flow on the flat plate.

General Topics: (a) High velocity measurement techniques for fluids (b) Scale up techniques.

Books Recommended:

Paper Title: ADVANCED MASS TRANSFER (Theory)
Paper Code : CHE 1.3 Max. Marks 50Credits : 4 Time: 3 hours
Course Duration: 45 Lectures of one hour each.

Note for the Paper setter: The question paper should be divided into Section A and Section B Total of 8 questions. 4 questions from section A and 4 questions from section B are to be set. The students will be required to attempt 5 questions selecting at least 2 from each section.

SECTION-A

General methods of solution of problem in unsteady state molecular diffusion in isotropic media. Derivation of equations of unsteady-state diffusion for typical cases of mass transfer in infinite, semi-infinite and finite plane media and in spherical and cylindrical media.

Mechanism of turbulent diffusion in fluids. Application of the concept of the boundary layer theory and of analogies of momentum heat and mass transfer to turbulent range diffusional phenomena. A theoretical treatment of inter relationship of mass transfer co-efficient and heat transfer – co-efficient.

SECTION-B

Interphase diffusional phenomena. Steady state and unsteady state theories of diffusion in two phase systems, significance of hydrodynamic factor in mass transfer between to phases in relative motion.

Mass transfer with Chemical Reactions. Diffusion reaction equations, slow reactions, fast reactions, transition from low to fast reaction, problems in practice.
Books Recommended:

Paper Title: CHEMICAL ENGINEERING THERMODYNAMICS (Theory)
Paper Code : CHE 1.4 Max. Marks 50 Credits : 4 Time: 3 hours
Course Duration: 45 Lectures of one hour each.
Note for the Paper setter: The question paper should be divided into Section A and Section B Total of 8 questions. 4 questions from section A and 4 questions from section B are to be set. The students will be required to attempt 5 questions selecting at least 2 from each section.

SECTION-A
Phase Equilibrium; Chemical potential, Gibbs Duhem equation & its applications, fugacity & activity, standard states, thermodynamic properties from volumetric data.
Intermolecular forces; Potential energy functions, electrostatic forces, polarizability & induced dipoles, hydrogen bonds.
Fugacities in gas and liquid mixtures, excess functions (Wohl’s expansion, Wilson’s equation, NRTL equation, UNIQUAC equation).

SECTION-B
Reaction equilibrium; Effect of temperature and pressure on reaction equilibrium constant, multi reaction equilibrium, multiphase equilibrium.
Vapor-liquid equilibrium; Applications of excess functions to binary mixtures, VLE plots for tertiary mixtures, estimation of activity coefficients.

Books Recommended:

Paper Title: ADVANCED TRANSPORT PHENOMENA (Theory)
Paper Code : CHE 1.5 Max. Marks 50 Credits : 4 Time: 3 hours
Course Duration: 45 Lectures of one hour each.
Instructions for the Paper setter: Total number of questions to be set = 08 with the following distributions:
Unit-I : 01 , Unit-II : 02 , Unit-III : 02 , Unit-IV: 02 , Unit-V : 01. The students will be required to attempt 5 questions selecting at least 01 question each from Unit-II , Unit-III and Unit-IV, and at least one question from Unit-I and Unit-V

Unit-I

(4 hrs)
Unit-II

Velocity distributions in laminar flow – shell momentum balances – Flow of falling film – flow of fluids through circular tubes, annulus and between parallel plates. Creeping flow around sphere – Drag calculations. (8 hrs)

Unit-III

Concentration distributions in solids and in laminar flow – shell mass balances, diffusion through a stagnant gas film, Diffusion with homogenous chemical reaction and heterogeneous chemical reaction. Diffusion into a falling liquid film – chemical reaction inside a porous catalyst. (10 hrs)

Unit-IV

Unit-V

Unsteady state problems in momentum, energy and Mass Transfer operations. Turbulence – Time smoothing of equations of change of momentum, energy and mass transfer. Eddy properties – Intensity of turbulence Reynolds stresses, Semi empirical expressions for turbulent – momentum – energy and mass fluxes. (7 hrs)

Books Recommended:

TEXT BOOKS

REFERENCE BOOKS
SYLLABUS FOR
M. E. (CHEMICAL ENGINEERING)
SECOND SEMESTER

Paper Title: ADVANCED HEAT TRANSFER (Theory)
Paper Code : CHE 2.1  Max. Marks 50 Credits : 4  Time: 3 hours
Course Duration: 45 Lectures of one hour each.
Note for the Paper setter: The question paper should be divided into Section A and Section B Total of 8 questions. 4 questions from section A and 4 questions from section B are to be set. The students will be required to attempt 5 questions selecting at least 2 from each section.

SECTION-A

Analysis of Convection Heat Transfer: Convection heat transfer, boundary layer fundamentals, conservation of mass, momentum and energy for laminar and flow over a flat plate, dimensionless Boundary – Layer equations & similarity parameters, dimensional analysis, integral equations of the laminar boundary layer, analysis between momentum and heat transfer over a flat surface; turbulent flow and turbulent boundary layers analysis, analysis for turbulent flow over a flat surface.

Heat Transfer by Natural Convection: Natural convection, temperature a velocity distribution in thermal boundary layers, governing equations of mass, momentum and energy for natural convection past vertical plane surface, approximate integral boundary layer analysis for natural convection, working correlations for various shapes, natural convection from finned surface, natural convection in enclosed spaces, natural convection from finned surfaces, mixed free and forced convection.

Forced convection Inside Tubes & Ducts: Analysis of laminar forced convection in long tube, correlations for laminar forced correction, analogy between heat and momentum transfer in turbulent flow, working correlations for turbulent forced convection, forced convection in noncircular sections.

Forced Convection over Exterior Surfaces: Flow over bluff bodies, local heat transfer coefficient distribution around cylinders, effect of various parameters on local heat transfer coefficient, heat transfer from tube bundles in cross-flow, heat transfer from non-circular sections.

SECTION-B

Heat Transfer with phase change: Drop wise and film wise condensation, analysis of laminar film condensation on vertical surfaces, working correlations for various shapes, effects of non-condensable gases, vapor velocity, sub-cooling of condensate, super heating of vapor, orientation of tube on condensation heat transfer coefficient, condensation on tube bundles, turbulent film condensation.

Boiling heat transfer, Pool boiling, forced convective boiling in horizontal and vertical tubes, sub cooled pool boiling, bubble departure diameter, bubble frequency, nucleation sites, effect of various parameters on boiling heat transfer coefficient.

Heat transfer in fixed bed, heat transfer in fluidized bed, heat transfer in cyclone heat exchanger.

Heat transfer by combined conduction, convection and Radiation: Thermocouple lead error in surface temperature measurements, heat transfer from radiating fins, the flat plat solar collector, the heat pipe.

Books Recommended:

Paper Title: DISTILLATION (Theory)
Paper Code : CHE 2.2  Max. Marks 50 Credits : 4  Time: 3 hours
Course Duration: 45 Lectures of one hour each.
Note for the Paper setter: The question paper should be divided into Section A and Section B Total of 8 questions. 4 questions from section A and 4 questions from section B are to be set. The students will be required to attempt 5 questions selecting at least 2 from each section.
SECTION-A

Graphical methods for estimating stage requirements for binary systems for one feed, two feed, one feed and one side stream with constant relative volatility.

Methods of estimation of minimum reflux, optimized feed stage and minimum number of stages.

Flash distillation for binary system. Application to multi-component mixtures and numericals.

SECTION-B

Extractive and azeotropic distillation, general considerations for the choice of separating agents.

Efficiencies in distillation, different methods. Tray and Hydraulic design.

Books Recommended:

Paper Title: CHEMICAL REACTION ENGINEERING (Theory)

Paper Code : CHE 2.3 Max. Marks 50 Credits : 4 Time: 3 hours

Course Duration: 45 Lectures of one hour each.

Note for the Paper setter: The question paper should be divided into Section A and Section B Total of 8 questions. 4 questions from section A and 4 questions from section B are to be set. The students will be required to attempt 5 questions selecting at least 2 from each section.

SECTION-A

Conversion and Reactor Sizing: Design equations for isothermal batch and flow systems. Applications of design equations for CSTR and plug flow reactors, Reactors in series, space time and space velocity.

Rate Laws and Stoichiometry: Relative rates of reaction, rate constant, elementary reactions, non-elementary reactions, reversible reactions, batch system stoichiometric table, flow system stoichiometric table, volume change with reaction.

Isothermal Reactor Design: Design structure for isothermal reactors, scale-up of liquid phase batch reactor data to design of CSTR, tubular reactors.

Multiple Reactions: Conditions for maximizing the desired product in parallel reactions. Maximizing the desired product in series reactions. Stoichiometric table using fractional conversion for multiple reactions.

Non-Isothermal Reactor Design: Energy balances: basic ideas about constant or mean and variable heat capacities, heat added to the reactor. Non-isothermal continuous flow reactors at steady state: application
to the CSTR, adiabatic tubular reactor, steady state tubular reactor with heat exchange. Multiple steady states (MSS) in a CSTR.

*Distribution of Residence Times for Chemical Reactors:* General characteristics, measurement of RTD: pulse input and step tracer experiment.

**SECTION-B**

*Catalysis and Catalytic Reactions:* Steps in a catalytic reaction, synthesizing a rate law, mechanism and rate limiting steps, design of reactors for gas-solid reactions, heterogeneous data analysis for reactor design.

*Diffusion and Reaction in Porous Catalysts:* Molar flux, Fick’s first law, binary diffusion, diffusion and reaction in spherical catalyst pellets, estimation of diffusion and reaction limited regimes.

*Models for Non-Ideal Reactors:* One parameter models: the tank-in-series model and the dispersion model. Two parameter models: real CSTR modeled with an exchange volume and real CSTR modeled using bypassing dead space.

**Books Recommended:**

**Paper Title:** ADVANCED PROCESS DYNAMICS AND CONTROL (Theory)

**Paper Code:** CHE 2.4 Max. Marks 50 Credits : 4 Time: 3 hours

**Course Duration:** 45 Lectures of one hour each.

**Note for the Paper setter:** The question paper should be divided into Section A and Section B Total of 8 questions. 4 questions from section A and 4 questions from section B are to be set. The students will be required to attempt 5 questions selecting at least 2 from each section.

**SECTION-A**

A brief review of frequency response technique, Ziegler-Nichols controller tuning rules, Bode and Nyquist plots, Bode-Nyquist stability criteria, development of empirical models from frequency response data: Graphical methods for 1st order plus dead time and 2nd order plus dead time processes.

*Advanced Control Strategies:*

*Cascade control:* Closed loop behavior and controller design for cascade control.

*Feed forward control:* Logic of feed forward control, designing of feed forward controllers, practical aspects on the design of feed forward controllers, feed forward-feed back control, ratio control.

*Feed back control systems with large dead time:* Smith Predictor scheme.

*Selective Control Systems:* Override control and Auctioneering control systems

*Adaptive and Inferential control.*

**SECTION-B**

A brief review of the dynamic behavior of control systems, control valves and valve characteristics. Stability of control systems by root locus method using P, PI and PID controllers, ¼ decay ratio criterion.

*Multivariable Control:* State space representation of physical systems, transfer function matrix, interaction of control loops, relative gain array and selection of loops, design of non-interacting control loops: Decouplers.
**Model based control:** Direct synthesis method (DSM)-controller design based on process model and desired closed loop transfer function. Internal Model Control- basic structure of IMC, design of internal model controller (IMC) and conventional feedback controller.

**Digital control:** Introduction to direct digital control (DDC), sampling continuous signals and its reconstruction.

**Books Recommended:**

**Paper Title:** PROCESS MODELLING AND SIMULATION (Theory)

**Paper Code:** CHE 2.5  Max. Marks: 50  Credits: 4  Time: 3 hours

**Course Duration:** 45 Lectures of one hour each.

**Note for the Paper setter:** The question paper should be divided into Section A and Section B Total of 8 questions. 4 questions from section A and 4 questions from section B are to be set. The students will be required to attempt 5 questions selecting at least 2 from each section.

**SECTION-A**

Introduction to mathematical modeling; Advantages and limitations of models and applications of process models of stand-alone unit operations and unit processes; Classification of models – Simple vs. rigorous. Lumped parameter vs. distributed parameter; Steady state vs. dynamic, Transport phenomena based vs. Statistical, empirical vs analytical. Concept of degree of freedom analysis.

Review of numerical methods used for solution of linear and non linear equations, ODE’s and PDE. Simple examples of process models; Models giving rise to nonlinear algebraic equation (NAE) systems, - steady state models of flash vessels, equilibrium staged processes distillation columns, absorbers, strippers, CSTR, heat exchangers, evaporators, etc.

**SECTION-B**

Unsteady state lumped systems: models giving rise to differential algebraic equations (DAE) with applications of laws of conservation of mass, momentum and energy. Analysis of liquid level tank, gravity flow tank, jacketed stirred tank heater, reactors, Flash separation column, multistage batch and continuous distillation column, Absorption and Extraction columns.

Unsteady State Distributed Systems: Analysis of laminar flow in pipe, heat exchanger, packed columns, plug flow reactor, packed bed reactor, absorption and extraction in packed beds.

**Books Recommended:**

**TEXT BOOKS**

**REFERENCE BOOKS**

Paper Title: PROCESS MODELLING AND SIMULATION
Paper Code : CHE 2.6 Max. Marks 25 Credits : 1

Practicals based on theory covered in Paper CHE 2.5.

Paper Title: SEMINAR
Paper Code : CHE 2.7 Max. Marks 25 Credits : 1
SYLLABUS FOR
M. E. (CHEMICAL ENGINEERING)
THIRD SEMESTER

Paper Title: Open Elective (Theory)
Paper Code : CHE 3.1 Max. Marks 50 Credits : 4 Time: 3 hours
Course Duration: 45 Lectures of one hour each.

Note for the Paper setter: The question paper should be divided into Section A and Section B Total of 8 questions. 4 questions from section A and 4 questions from section B are to be set. The students will be required to attempt 5 questions selecting at least 2 from each section.

1. RESEARCH METHODOLOGY

SECTION-A

Introduction: Meaning, Features, Objectives/Motives & types of Research; Attributes of good Research, Research Methods and Research Methodology; Research Process, Significance of Research in Managerial decision making.
Research Design: Meaning, Characteristics and various concepts relating to research design and classification of research design, Importance.
Measurement and Scaling: Data Types Nominal, Ordinal and Ratio scale; scaling techniques.
Formulation of Hypothesis: Meaning, Characteristics and concepts relating to testing of Hypothesis (Parameter and statistic, Standard error, Level of significance, type-I and Type-II errors, Critical region, one tail and two tail tests); Procedure of testing Hypothesis. Numerical problems based on chi-square test and Ftest (variance ratio test only).

SECTION – B

Data Collection: Sources of Data-Primary/Secondary Methods of collecting data; direct personal interview, indirect oral interview, information through local agencies, mailed questionnaire method, schedule sent through enumerators; questionnaire and its designing and characteristics of a good questionnaire.
Sampling Design: Meaning and need of Sampling, Probability and non-probability sampling design, simple random sampling, systematic sampling, stratified sampling, cluster sampling and convenience, judgement and quota sampling (non-probability), determination of sample size.
Data Analysis & Interpretation: Introduction to Multivariate analysis- Multiple and partial correlation, multiple regression analysis (with two independent variables), specification of regression models and estimation of parameters, interpretation of results. Analysis of Variance (ANOVA)-One way and Two way ANOVA. Introduction to discriminant analysis and Factor Analysis (Numerical not to be asked)
Report writing: Style/format, contents and essential steps for report writing.

Suggested Readings:
2. Ranjit Kumar:Research Methodology, Pearson Education 2009-02-20
3. Donald R. CooperPamela S. Schindler: Business Research Methods, Tata McGraw Hill
5. R. Pannerselvam: Research Methodology, Parentice Hall of India Limited.
7. William G.Zikmund :Business Research Methods, Thomson South Western Publication
2. PROJECT MANAGEMENT

SECTION-A

Project Management: concept of project management, project management systems, responsibilities and qualities of a project manager, project management team-composition, functions and responsibilities, coordination procedures. Manpower planning; recruitment and selection job description, specification and evaluation, performance appraisal, basis of remuneration and incentives. Project Identification: Principles of project identification, importance of capital investment, decision making industrial policy resolution, industrial development and regulation act, supply and demand analysis, incentives for industrially backward areas and small scale industries, foreign collaboration and foreign exchange regulations. Appraisal criteria and selection of investment: Non discounting criteria, discounting criteria, appraisal and selection in practice.

SECTION-B

Books Recommended:

3. OPTIMIZATION TECHNIQUES

SECTION-A

SECTION-B

Geometric Programming: as applied to chemical Engineering problems with degree to difficulty equal to zero and one , with and without constraints; Search Methods: Sequential Search method, Golden Section method, Dichotomous Search method; Introduction to Dynamic Programming as applied to discrete multistage problems like Cascade of CSTR, Train of Head exchangers etc.

Books Recommended:

3. Hadley : Linear Programming.
4. SAFETY & HAZARDS

SECTION A
Definitions, identifications, Classifications and assessment of various types of hazards in work-place environment. Protective and preventive measures in hazard control.
Toxic chemicals: Maximum allowable concentrations and other standards. Biological threshold limit values.
Mechanical and electrical hazards, personal protective equipments.

SECTION B
Standard safety procedures and disaster control. Indian legislation on safety and prevention of hazards and safety code.
Case study of typical hazardous industry.

Books Recommended:

4. ANALYTICAL TECHNIQUES

SECTION A
Complexometric titrations: Complexes-formation constants; chelates – EDTA, Chelon Effect, EDTA equilibria, effect of pH on EDTA equilibria, EDTA titration curves, endpoint – detection and indicators; Importance of complexometric titrations.
Solvent Extraction: Distribution law, extraction process, factors effecting extraction, technique for extraction, quantitative treatment of solvent extraction equilibria, classification of solvent extraction systems. Advantages and applications of solvent extraction.

Chromatography: Introduction to chromatography, principles, classification of chromatographic techniques, thin layer and paper chromatography – principle and technique.

SECTION B
NMR: Principle, chemical shift, spin-spin coupling shift reagents, instrumentation, spectra and molecular structure, identification of organic compounds on the basis of NMR.

Thermoanalytical methods: Principle, classification of methods.
TGA – Instrumentation, factors affecting results and analysis of data. applications.
DTG – Instrumentation, analysis of data and applications.
DTA – Principle, Instrumentation and applications.

Books Recommended:
6. COMPOSITE MATERIALS

SECTION-A
Concepts underlying formation, characteristics and behavior of plastic-based composites such as fiber glass laminates, structural sandwiches, plywood and load-bearing adhesive joints. Typical components such as metals, glass, synthesis and natural adhesives, plastics, foams, wood, paper, fabrics and rubber.

SECTION-B
Correlation between adhesion principles and physical behavior. Methods of design, analysis, fabrication and testing. Discuss failure mechanisms of chemical and mechanical types.

Paper Title: Elective (Theory)
Paper Code : CHE 3.2 Max. Marks 50 Credits : 4 Time: 3 hours
Course Duration: 45 Lectures of one hour each.
Note for the Paper setter: The question paper should be divided into Section A and Section B Total of 8 questions. 4 questions from section A and 4 questions from section B are to be set. The students will be required to attempt 5 questions selecting at least 2 from each section.

SECTION-A

Industrial Pollution Control and Abatate.

SECTION-B

Air pollutants : Sources, effects, plume behavior, characterization, stack height, Gaussian Plume design model, Control methods, particulate emission control methods gravitational settling chambers, cyclone separators, fabric filters, electrostatic precipitators, wet scrubbers, control of gaseous emissions.

Books & References
1.  Air Pollution by Perkins
2.  Air Pollution by Rao & Rock
3.  Industrial Pollution Control by Mr. S.P.Mahajan
4.  Eddy Mt Calf Disposal of Wastes Water
5.  “Environment Engg. & Science” by Sincero & Sincero

2.  Energy Technology

SECTION-A
Fuels and combustion, Classification of fuels, Biolers, Design of furnaces, properties and testing of fuels, Solids, liquid and gascous fuel burners, Refractories, classification, properties and applications, insulated pipe work systems, Building heat balance.

SECTION-B

Books :
3. POLYMER CHEMISTRY & CHARACTERIZATION

SECTION-A

SECTION-B

Principle and instrumental details of techniques for polymer characterization and testing for molecular weight and its distribution, mechanical strength, tensile, compression, flexural, impact, torsion, electrical properties, optical properties, thermal properties, structure determination-NMR scanning electron microscopy, etc.

Books Recommended:

4. Alternate Energy Technology

SECTION-A

Solar Energy Fundamentals, Solar Radiation Characteristics and Measurements. Low temperature energy collection, high temperature energy collection, solar thermal power generation systems, Domestic industrial and agricultural applications of solar energy.

SECTION-B

Books:

Energy Technology, S. Rao, Dr. B.B. Parulekar, Khanna Publisher, 2000.
Non Conventional Energy Sources, G.D. Rai, Khanna Publisher, 1997

5. MACROMOLECULAR HYDRODYNAMICS
SECTION-A

Types of flow, viscosity measurement, flow curve, zero-shear viscosity, activation energy of flow, effect of different parameters on viscosity; Boltzmann principle, Linear Viscoelastic models.

SECTION-B

Time-temperature superposition principle, WLF equation and its applications, master curve and its use, Flow of Non Newtonian fluids through pipes and channels. Thermodynamics in Polymer Processing.

Books Recommended:
