## SEMESTER I

**Paper Title**: Calculus  
**Paper Code**: MATHS101  
**Pre Requisite**: 10+2  
**Max (Univ. Exam) Marks**: 50  
**Internal Assessment**: 50  
**Course Duration**: 45 lectures of one hour each.

**Note for the examiner**: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

**Objectives**
- To understand the behaviour of infinite series and its use.
- To learn the concepts of functions of two and more than two variables and their applications.
- To learn the methods to evaluate multiple integrals and their applications to various problems.
- To understand the concepts of Vector calculus and their use in engineering problems.

<td>Line integrals, Vector fields, Work, Circulation and Flux, Path Independence, Potential functions and Conservative fields, Green’s theorem in the plane, Surface Areas and Surface Integrals, Stoke’s Theorem, Gauss Divergence Theorem (Statements only) (Scope as in Chapter 14 of Reference 1).</td>
</tr>
</tbody>
</table>

### Outcomes
- The students are able to test the behavior of infinite series.
- Ability to analyze functions of more than two variables and their applications.
- Ability to evaluate multiple integrals and apply them to practical problems.
- Ability to apply vector calculus to engineering problems

### References:
Paper Title: Introduction to Computer Science and Engineering  
Paper Code: CS102  
Course Duration: 45 lectures of one hour each.

Max (Univ. Exam) Marks: 50  
Internal Assessment: 50  
Time of examination: 3hrs.

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Course Objectives:
1. To appraise students about various disciplines in Computer Science and Engineering.
2. To make students aware of emerging trends of Computer Science and Engineering.

1. Introduction
   What is computer science?, Differentiating computer science from engineering, Classification of computers, History, Types of Computers, Block Diagram of a Computer System, Introduction to various units, CPU, Memory, Input and Output devices, Auxiliary storage devices. Turing model, Von-Newmann model, social and ethical issues in computer science and engineering. (8)

2. COMPUTER HARDWARE AND SOFTWARE
   Introduction to computer hardware, components of mother boards & its types-ports, slots, connectors, add on cards, Basics of Number System. Application software, system software, interpreter, compliers, editor, computer viruses, worms, frozen. (6)

3. Computer Organization
   Central processing unit, computer storage: memory hierarchy, basics of RAM ,ROM , PROM, EPROM, Floppy, CD Rom, CDRW, DVD, Virtual memory, Cache memory, Physical memory (5)

   Section B

4. LOGIC DEVELOPMENT AND ALGORITHMS
   Various techniques to solve a problem, Ways to specify an algorithm, Flow charts. (6)

5. AREAS OF COMPUTER SCIENCE AND ENGINEERING
   Theory of computation, algorithms and data structures, Database, Artificial Intelligence, Computer Networks, Software Engineering, Computer Vision, Web and Internet. (16)

4. Trends in computing. Social and ethical issues related to computing technology, Professional development opportunities. (4)

Course Outcomes:
1. The student will have knowledge about various fields of Computer Science and Engineering.
Text Books:
   1. Computing Fundamentals, Peter Nortan, Tata McRaw Hill

Reference Books:
Paper Title       : Programming Fundamentals (Theory)

Paper Code       : CS101 / CS201
Course Duration: 45 lectures of one hour each.

Max (Univ. Exam) Marks : 50   Time of examination: 3hrs.
Internal Assessment : 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Objective: To get basic knowledge of computers, its components and Operating systems and Linux. Shell Commands.

PART A

1. Introduction: (5 hrs)
   Introduction to Programming Languages, Flowcharts, Algorithms, System Software (Assembler, Compiler, Translator, Debugger), Program Structure.

2. Basic Constructs of C: (7 hrs)
   Keywords, Identifiers, Variables, Symbolic Constants, Data Types and their storage, Operands, Arithmetic Operators, Relational Operators, Logical Operators, Bitwise Operators, Increment & Decrement Operators, Expressions, Conditional Expressions, Assignment Operators and Expressions, Type Conversions, Precedence and Order of Evaluation, External Variables and Scope of Variables. Basic Input Output, Formatted I/O.

3. Program Control Flow: (7 hrs)
   Statements and Blocks, Conditional Statements, IF, ELSE-IF, Switch Case statements, Control Loops, For, While and Do-While, Go to and Labels.

4. Arrays & Functions: (7hrs)
   Arrays, Multi dimensional arrays, strings, pointer arrays, Functions, Function Prototyping, Scope of functions, Arguments, Call by value and call by references, static variables, recursion.

PART B

5. Structures: (6 hrs)
   Structures, Array of Structures, Typedef, Unions, Bit fields, passing structures as an argument to functions, C-Pre-processor and Macros, Command line arguments.
6. Pointers:(6)
Pointer declaration, initialization, Pointer arithmetic, Pointer to array and Pointer to structure.

7. Input and Output (7 hrs)
Standard and Formatted Input and Output, File Access & its types, Line Input and Output, Types of Files, Binary & ASCII Files, Error handling, stderr and exit functions.

Recommended Books:
Instruction for Students: The candidate will be attending a laboratory session of 2 hours weekly and students have to perform the practical related to the following list.

1. Introduction to basic structure of C program, utility of header and library files.
2. Implementation of program related to the basic constructs in C
3. Program using different data types in C
4. Programs using Loops and Conditional Statements in C
5. Programs using arrays single dimension and multi dimensions in C.
6. Implementation of Matrices and their basic functions such as addition, subtraction, multiplication, inverse.
7. Programs using functions by passing values using call by value and call by reference method
8. Programs related to structures and unions
9. Program to implement array using pointers
10. Programs related to string handling in C
11. Program to manage I/O files and Pointers
Physics Course 1

Any one of the following three papers to be chosen by institute

Paper Title       : Oscillations And Optics (Theory)
Paper Code       : APH 101 / APH 201
Course Duration: 45 lectures of one hour each.

Max (Univ. Exam) Marks : 50        Time of examination: 3hrs.
Internal Assessment : 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

PART A

Ultrasonics: Production and detection of ultrasonics (2)

SHM: Review of SHM, superposition of two SHM in one dimension, charge oscillations in LC circuits (3)

Damped Oscillations: Concept and cause of damping, differential equation of a damped oscillator and different kinds of damping, Methods of describing damping of an oscillator - logarithmic decrement, relaxation time, quality factor, band width. Series LCR circuit as a damped oscillator. (3)

Forced Oscillations: States of forced oscillations, differential equation of forced oscillator – its displacement, velocity and impedance, behaviour of displacement and velocity with driver’s frequency, Power, bandwidth, Quality factor and amplification of forced oscillator, resonance in forced oscillators, forced oscillations in series LCR circuit (4)

Wave Motion: Wave equation and its solution, characteristic impedance of a string, reflection and transmission of waves on a string at a boundary, reflection and transmission of energy, the matching of impedances (3)

PART B

Interference: Division of wave front and amplitude; Fresnel’s biprism, Newton’s rings, Michelson interferometer and its applications for determination of λ and dλ. (4)

Diffraction: Fresnel and Fraunhofer diffraction, qualitative changes in diffraction pattern on moving from single slit to double slit, plane transmission grating, dispersive power & resolving power of a grating. (5)
**Polarization:** Methods of polarization, analysis of polarized light, quarter and half wave plates, double refraction. (4)

**Lasers:** Elementary idea of LASER production, spontaneous emission, stimulated emission, Einstein’s coefficients, Helium-Neon, Ruby and semiconductor lasers, applications of lasers. (4)

**Fibre Optics:** Basics of optical fibre - its numerical aperture, coherent bundle, step index and graded index fibre, material dispersion, fibre Optics sensors, applications of optical fibre in communication systems. (3)

**Holography:** Basic principle, theory and requirements, applications (2)

**References:**
1. Physics for Engineers (Prentice Hall India) - N.K. Verma
3. Optics – Ajoy Ghatak

**Paper Title** : Oscillations and Optics Practical

**Internal Assessment:** 50

1. To study Lissajous figures obtained by superposition of oscillations with different frequencies and phases.
2. To find the wavelength of sodium light using Fresnel’s biprism.
3. (i) To determine the wavelength of He-Ne laser using transmission grating.
   (ii) To determine the slit width using the diffraction pattern.
4. To determine the wave length of sodium light by Newton’s rings method.
5. To determine the wave length of sodium light using a diffraction grating.
6. To find the specific rotation of sugar solution using a Bi-quartz Polarimeter.
7. To design a hollow prism and used it find the refractive index of a given liquid.
8. To determine the wavelength of laser using Michelson interferometer.
Max (Univ. Exam) Marks : 50    Time of examination: 3hrs.
Internal Assessment : 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

PART A

SPECIAL THEORY OF RELATIVITY

Inertial and non-inertial frames of reference, Galilean transformation, Michelson Morley Experiment, postulates of special theory of relativity, Lorentz transformation, Simultaneity, Length contraction, Time dilation, Doppler effect, Addition of velocities, variation of mass with velocity, mass-energy relation (7)

ORIGIN AND POSTULATES OF QUANTUM PHYSICS

Quantum theory of light, X-rays production, spectrum & diffraction (Bragg’s law), photoelectric effect, Compton effect, pair production, photons & gravity, black holes, de-Broglie hypothesis, particle diffraction, uncertainty principle and applications (7)

Postulates of quantum mechanics, Schrodinger theory, time-dependent and time-independent Schrodinger equation, wave function, Born interpretation and normalization, expectation values (3)

PART B

APPLICATIONS OF QUANTUM PHYSICS

Particle in a box (infinite potential well), finite potential step and barrier problems, tunneling, linear harmonic oscillator (one-dimensional) (4)

Hydrogen atom (qualitative), radiative transitions and selection rules, Zeeman effect, Spin-orbit coupling, electron spin, Stern-Gerlach experiment, exclusion principle, symmetric and antisymmetric wavefunctions (5)

STATISTICAL PHYSICS

References:

2. Solid State Physics, by C. Kittel (Wiley Eastern)
3. Solid State Physics, by S.O. Pillai (New Age International)
4. Statistical Physics and Thermodynamics by V.S. Bhatia

Paper Title: Quantum And Statistical Physics (Practical)

Internal Assessment: 50

1) To study the quantized energy level of the first excited state in the Argon using the Frank-Hertz setup.
2) To find the value of Planck’s constant and evaluate the work function of cathode material by used of photoelectric cell.
3) To study various characteristics of photo-voltaic cell: (a) Voltage-current characteristics, (b) loading characteristics, (c) power-resistance characteristics and (d) inverse square law behavior of the photo-current with distance of source of light from photo-voltaic cell
4) To study the response of a photo-resistor to varying intensity of light falling on it and deduce spectral sensitivity of its semiconductor material.
5) To study the Balmer Series of Mercury and Hydrogen spectrum using diffraction grating and calculate Rydberg constant
Paper Title : Physics of Materials  
Paper Code : APH207 / APH107  
Course Duration: 45 lectures of one hour each.

Max (Univ. Exam) Marks : 50  Time of examination: 3hrs.

Internal Assessment : 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Part - A

Crystal structure: Bonding forces and energies, Primary and Secondary bonds, Space Lattices, Symmetries in a cubic lattice, Crystal Structures (cubic and hexagonal cells), Assignment of coordinates, directions and planes in crystals, Linear, Planar and Space densities in crystals, close packed morphology (Hexagonal and cubic close packing), single and polycrystalline structures, interstitial spaces (trigonal, tetrahedral and octahedral voids)
Structure of ceramics (NaCl, Zinc blende, silica and silicates, diamond crystal, Graphite, Fullerenes and carbon nanotubes)
Structure of polymers, crystallinity of long chain polymers
Crystal Structure analysis, X-ray diffraction and Bragg’s law, Powder method for study of X-ray diffraction pattern
Crystal Defects (Point, line, surface and volume imperfections)  

(14hrs)

Diffusion: Diffusion mechanisms, steady state diffusion, non-steady state diffusion, factors affecting diffusion, applications based on diffusion (corrosion resistance of Duralumin, carburization of steel, decarburization of steel, doping of semiconductors)  

(3hrs)

Elastic, Anelastic and Viscoelastic Behaviour  Elastic behaviour and its atomic model, rubber like elasticity, anelastic behaviour, relaxation processes, viscoelastic behaviour, spring-dashpot model  

(3hrs)

Part - B

Plastic Deformations and strengthening mechanisms : Tensile properties (Yield strength, Tensile Strength, Ductility, Resilience, Toughness), Dislocations and plastic deformation, characteristics of dislocations, slip systems, slip in single crystals, plastic deformation of polycrystalline materials, mechanisms of strengthening in metals (grain size reduction, solid-solution strengthening, strain hardening), recovery, recrystallization and grain growth  

(5hrs)

Fracture, Fatigue and Creep : Fracture (Ductile and brittle fractures), principles of fracture mechanics, fracture toughness, ductile to brittle transitions Cyclic stresses, S-N curve, crack
initiation and propagation, factors that affect fatigue life, environmental effects, generalized creep behavior, stress and temperature effects.

(5hrs)

(6hrs)

**Phase Transformations:** Kinetics of phase transformation, kinetics of solid state reactions, Isothermal transformation diagrams, continuous cooling transformation, temper embrittlement

(4hrs)

**References:**

**Paper Title** : Physics of Materials (Practical)

**Internal Assessment** : 50

1. To find the energy band gap of the given semiconductor by four probe method.
2. To study the Hall Effect of a given semiconductor.
3. To determine the dielectric constant of the given materials.
4. To study the B-H curve of the ferromagnetic materials.
5. To determine the value of e/m for electron by long solenoid (helical) method.
6. To study the variation of magnetic field with distance along the axis of a circular coil carrying current by plotting a graph.
7. To find the Curie temperature of a Ferroelectric material by measuring Capacitance as a function of temperature.
8. To determine the thermal conductivity of an insulator material using guarded plate method (Lee's disc method).
9. To Study (a) Voltage-current characteristics (b) loading characteristics (c) Power-Resistance characteristics and (d) intensity response of photovoltaic cell.
Paper Title : Ethics and Self Awareness (Theory)
Paper Code : HSS101 / HSS201

Max (Univ. Exam) Marks: 50  Time of examination: 3hrs.
Internal Assessment: 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

BOOKS
8. Twain, Allan, “Self-Awareness”
Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

PART A

General (04)
Introduction, components of the environment, environmental degradation.

Ecology (04)
Elements of ecology: Ecological balance and consequences of change, principles of environmental impact assessment.

Air pollution and control (06)
Atmospheric composition, energy balance, climate, weather, dispersion, sources and effects of pollutants, primary and secondary pollutants, green house effect, depletion of ozone layer, standards and control.

PART B

Water pollution and control (06)
Hydrosphere, natural water, pollutants their origin and effects, river/lake/ground water pollution, standards and control.

Land Pollution (06)
Lithosphere, pollutants (municipal, industrial, commercial, agricultural, hazardous solid wastes): their origin and effects, collection and disposal of solid waste, recovery and conversion methods.

Noise Pollution (04)
Sources, effects, standards and control.
Books & References

SEMESTER II

Paper Title : Differential Equations and Transforms
Paper Code : MATHS201
Pre Requisite : Calculus (MATHS101)
Course Duration: 45 lectures of one hour each.

Max (Univ. Exam) Marks : 50 Time of examination: 3hrs.
Internal Assessment : 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Objectives

• To learn the methods to formulate and solve linear differential equations and their applications to engineering problems
• To learn the concepts of Laplace transforms and to evaluate Laplace transforms and inverse Laplace transform
• To apply Laplace transforms to solve ordinary differential equations
• To learn the concept of Fourier series, integrals and transforms.
• To learn how to solve heat, wave and Laplace equations.

<tr>
<td>Review of geometrical meaning of the differential equation $y' = f(x, y)$, directional fields, Exact differential equations (Scope as in Chapter 8, Section 8.7 of Reference 5), Integrating factors (Scope as in Chapter 8, Section 8.8 of Reference 5), Solution of differential equations with constant coefficients: method of differential operators. Non – homogeneous equations of second order with constant coefficients: Solution by method of variation of parameters (Scope as in Chapter 9, Section 9.7 of Reference 5). Power series method of solution (Scope as in Chapter 10, Section 10.2 of Reference 2)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
### 2. Laplace Transforms
Laplace transform, Inverse transforms, shifting, transform of derivatives and integrals. Unit step function, second shifting theorem, Dirac’s Delta function. Differentiation and integration of transforms. Convolution Theorem on Laplace Transforms. Application of Laplace transforms to solve ordinary differential equations with initial conditions (Scope as in Chapter 5, Sections 5.1 – 5.5 of Reference 1).

### PART B

#### 3. Fourier Series and Transforms: Periodic functions, Fourier series, Even and odd series, half range expansions, Complex Fourier Series, Approximation by trigonometric polynomials. Fourier integrals, Fourier Cosine and Sine transforms, Fourier Transforms (Scope as in Chapter 10, Sections 10.1 – 10.5, 10.7 – 10.10 of Reference 1).

#### 4. Partial Differential Equations: Partial differential equations of first order, origin, solution of linear partial differential equations of first order, Integral surfaces passing through a given curve (Scope as in Chapter 2, Sections 1, 2, 4, 5 of Reference 4).

#### 5. Boundary Value Problems: D’Alembert’s solution of wave equation, separation of variables: one dimension and two dimension heat and wave equation, Laplace equation in Cartesian and Polar coordinates (Scope as in Chapter 11, Sections 11.1, 11.3 – 11.5, 11.8 – 11.9 of Reference 1).

</tr>
</tbody>
</table>

**Outcomes**
1. The student will learn to solve Ordinary Differential equations.
2. The students will be able to apply the tools of Laplace Transforms to model engineering problems and solve the resulting differential equations.
3. Students will understand the nature and behavior of trigonometric (Fourier) series and apply it to solve boundary value problems.

### Paper Title
Communication Skills

### Paper Code
HSS202 / HSS102

### Max (Univ. Exam) Marks
50

### Time of examination
3hrs.

### Internal Assessment
50

### Note for the examiner:
The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

#### Part –A

<td></td>
<td></td>
</tr>
<tr>
<td>2.</td>
<td>CATALYSIS: Catalysis and general characteristics of a catalytic reactions, homogeneous catalysis, kinetics of acid, base and enzyme catalysis – Michealis Menten equations. Heterogenous catalysis. Application of catalysis for industrially important processes—hydrogenation (Wilkinson’s catalyst), hydroformylation, acetic acid process and Wacker process.</td>
<td>6</td>
</tr>
<tr>
<td>3.</td>
<td>ELECTROCHEMISTRY: Introduction to electrochemistry, types of electrodes, Ion selective electrodes, Reference electrodes, Fuel cells (hydrogen-oxygen, propane-oxygen, methanol-oxygen fuel cells), Corrosion: Types of corrosion, dry and wet corrosion and their mechanisms, types of electrochemical corrosion (galvanic, pitting, waterline, differential aeration, soil, microbiological, inter-granular, stress corrosion), Factors influencing corrosion, Prevention of corrosion.</td>
<td>8</td>
</tr>
<tr>
<td><strong>PART B</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>4.</td>
<td>POLYMER CHEMISTRY: Classification of polymers, Mechanism and methods of polymerisation, idea of number average and weight average molecular masses of polymers, preparation, properties and uses of polystyrene, polyester, polyamide, phenol-formaldehyde, silicones and epoxy resins.</td>
<td>5</td>
</tr>
</tbody>
</table>
transition of organic molecules, Woodward-Fieser Rules for calculating $\lambda_{\text{max}}$ for dienes. **IR**- Introduction, Principle of IR spectroscopy-Fundamental vibrations, Application to simple organic molecules (effect of masses of atoms, bond strength, nature of substituent, hydrogen bonding on IR frequency), sample preparation for IR.

| 6. | **COORDINATION CHEMISTRY:** Introduction, Crystal Field Theory, Splitting of octahedral, tetrahedral and square planner complexes, crystal field stabilization energies of octahedral and tetrahedral complexes and its applications. |

**Books suggested:**

**Practicals:**
Instruction for Students: The candidate will be attending a laboratory session of two hours weekly and has to perform any eight experiments.

- Volumetric analysis: iodometric titrations, complexometric titrations, Acid-base titrations
- Analysis of lubricants: Viscosity/surface tension/saponification value/acid value
- Instrumental techniques for chemical analysis: conductometry, potentiometry, UV-visible/IR spectrophotometer.
- Preparation of few organic compounds/inorganic complexes/polymer

**Books Recommended:**

Course Prerequisites: Basic Workshop Practices

Course Objectives (CO):

1. Know different machines, tools and equipment, Identify different Engineering materials, metals and non-metals.
2. Understand different Mechanisms, Use of Machines, Tools and Equipment.

Course Outcome:

This course is designed to help students achieve the following outcomes.
1) Familiarity with common machines, Tools and Equipment in basic Workshop Practices.
2) On hand basic workshop practices in Electronics, Electrical, Machine, Welding, Fitting, Sheet Metal, Smithy, Foundry and Carpentry Workshops in Engineering professions.
3) Applications of Basic Workshop Practices.

SYLLABUS

Instruction for Students: The candidate will be attending a laboratory session of three hours weekly.

Practice of basic exercises related with different shops. On hand basic workshop practices in Electronics, Electrical, Machine, Welding, Fitting, Sheet Metal, Smithy, Foundry and Carpentry Workshops in Engineering professions.

Jobs: Butt Joint in Flat Position using SMAW.
   Lap Joint using Spot Welding
   Edge Joint in Horizontal Position using SMAW
   Tee Joint in Flat position using SMAW
   Corner Joint in vertical position using SMAW.
   Defect Identification and marking.
   Edge preparation and Fillet making, Tacking, Distortion identification
Electronics Workshop: To know about Soldering mechanism and techniques  
Familiarity with Electronic Components / symbols  
Testing of electronic components  
Application of Soldering: Circuit Assembly  
List of Jobs:  
Practice of Soldering and de-soldering  
Identification and testing of a) passive electronic components b) Active electronic components  
Assembly of Regulated Power supply circuit

Electrical Workshop:  
Introduction of Various Electric wirings, Wiring Systems, Electrical wiring material and fitting, different type of cables, Conduit pipe and its fitting, inspection points, switches of all types, Distribution boards, M.C.B’s etc.  
Electric Shock and its management.  
Electric Tools: Conversance with various tools and to carry out the following:  
   a) Measurement of wire sizes using SWG and micrometer  
   b) Identification of Phase and neutral in single phase supply

Jobs:  
To control a lamp with a single way switch  
To control a lamp from two different places  
To assemble a fluorescent lamp with its accessories  
To control a lamp, fan and a three pin socket in parallel connection with single way switches

Fitting Shop:  
Introduction of Fitting, different type of operations, Tools, materials, precision instruments like Vernier caliper and Micrometer etc,  
Safety precautions and Practical demonstration of tools and equipments

Jobs: To make a square from MS Flat, Punching, Cutting, Filling techniques and practice, Tapping, Counter Drilling

Smithy Workshop:  
Jobs: Drawing and Upsetting Practice using Open Hearth Furnace.  
Cold working process practice  
Heat Treatment \: Annealing and hardening process

Machine Shop: Application, Function and different parts, Operations of Lathe, Type of Cutting Tools and their materials, Drill machine Types, applications and Functions.  
Hacksaw machines and functions, Work Holding devices and tools, chucks, Vices, machine Vices, V Block, Measuring Instruments uses, Shaper and Milling machine Applications.  
Jobs: To perform Marking, Facing, Turning,taper Turing, Grooving, Knurling, parting, Drilling, Reaming operations on lathe machine,  
Hacksawing practice on Power hacksaw,  
Shaping operation practice on Shaper
Carpentry Shop: Classification of Tree, Timber. Advantages and uses of Timber, Seasoning of Wood, Tools Used, Defects and Prevention of Wood,

Jobs:
Tee Joint
Cross Joint
Tenon Joint,
L Shape Joint
Practice of Wood Working Lathe
Practice on multi-purpose Planer

Foundry Shop: Introduction to Foundry, Advantages and Disadvantages of castings process, Introduction to pattern and various hand tools, Ingredients of Green sands, Various Hand Molding processes, Introduction to Casting Defects,

Jobs: Identification and uses of hand tools, Preparation of Green sand in Muller, Preparation of Sand Mould of Single piece solid pattern, Split pattern, Preparation of Green sand Core, casting of a Mould and study its defects.

Paper Title       : Digital Electronics and Logic Design
Paper Code       : CS203
Max (Univ. Exam) Marks : 50    Time of examination: 3hrs.
Internal Assessment : 50
Course Duration: 45 lectures of one hour each.

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Objectives: The objective of this course is to provide knowledge about digital electronics circuitry.

Section A
Module 1: IC Digital Logic Families -Characteristics of digital IC.s, Transistor – Transistor Logic family, Standard TTL characteristics, Other TTL series, Open collector TTL, Wired OR/AND connection, Tristate TTL, Emitter-Coupled Logic family, ECL NOR/OR gate and its characteristics, Metal-oxide semi-conductor (MOS) family, NMOS and CMOS gates and their characteristics, CMOS transmission gate circuits.

(7)
Module 2: Simplification of Boolean Functions -Using Karnaugh map and Quine-Mccluskey methods, SOP, POS simplification, NAND and NOR implementations, other two-level implementation (AND-OR-INVERT).

(6)

(7)

Section B
Module 4: Combinational Logic Design using MSI Circuits -Application of typical IC.s like 4-bit parallel adder (ex : 7483), Encoders (ex :74148), Multiplexers (ex: 74151, 74153, 74157) and their use in realising boolean functions, Multiplexer trees, Demultiplexer / Decoders (e.g.: 74138, 74154) and their use in realising a boolean function and demultiplexer trees, 4-bit magnitude comparator (ex:7485).

(7)
Module 5: Synchronous Sequential Logic-Analysis of clocked sequential logic, State reduction and assignment, Flip-flop excitation tables, Design procedure, Design of sequential circuits ex : 3-bit up/down counter (mod < 8), 3-bit up/down gray code counter, Serial adder.

(5)
Module 6: Counters-Dependancy notation, Symbols for Decoder, Multiplexer, Flipflops, Registers, Counters, RAM. Flipflops, Asynchronous counters (mod 8 and less than 8), IC asynchronous counters (7493, 7490) and cascading, synchronous counters, binary and binary up-down counters, IC synchronous counters (74192, 74190) and cascading.

(6)
Module 7: Registers-Registers and their different modes of operation SISO, SIPO, PISO, PIPO, Shift registers (7495 / 74195), bidirectional universal shift register (74194), Applications of shift registers, Time delay, Ring counter, Johnson counter, Sequence generator; Programmable Logic Devices-PLD, PLA, PAL, FPGA structures & applications.

(7)
Text Books:

Reference Books:
1. Tocci : Digital Systems PHI , 6e, 2001

Practicals:

1. To study truth tables of AND, OR, NOR, NAND, NOT and XOR Gates.
2. To verify the truth tables of RS, of JK and T Flip Flops.
3. To fabricate and test the truth table of half and full adder.
4. To design and implement a Modulo-N Counter.
5. To design and implement a Universal shift register.
6. Design and fabrication of synchronous counter
7. Design and fabrication of combinational circuits using Multiplexers
8. To convert 8 bit Digital data to Analog value using DAC.
9. To convert Analog value into 8 bit Digital data using ADC
Paper Title : OBJECT ORIENTED PROGRAMMING  
Paper Code : CS202  
Max (Univ. Exam) Marks : 50  
Time of examination: 3hrs.  
Internal Assessment : 50  
Course Duration: 45 lectures of one hour each.  

Pre-requisites: Programming Fundamentals (CS101/201)  

Objectives To understand the basic concepts of object oriented programming languages and to learn the techniques of software development in C++.  

Note for Examiner The Semester question paper of a subject will be of 50 marks having 7 questions of equal marks. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt at least two questions from each part.  

SECTION-A  

1. Principles of Object Oriented Programming  
2. Tokens, Expressions and control structures, various data types, and data structures, Variable declaration, Operators and scope of operators.  
3. Pointers, Functions, Classes and Objects: Prototyping, referencing the variables in functions, memory allocation for classes and objects, Array of objects, pointers to member functions.  
4. Constructors and Destructors, Operator Overloading and type conversion.  
5. Inheritance: Derived classes, types of inheritance, and various types of classes.  

SECTION-B  

6. Virtual functions and Polymorphism.  
8. Exception Handling and Generic programming with templates: Introduction to templates, overloading of template functions and Inheritance. Introduction to standard Template Library  

Text Book:  

References:  

2. Bala Guruswamy: Object oriented programming with C++, TATA McGraw Hill
