Note: Students will undergo four week in-house training during summer vacations in their respective branches. They will be trained to handle laboratory and practical aspects in their field of engineering.

* Practical marks are for continuous and end semester evaluation

# Any one of the following three papers to be chosen by the institute

- Paper Title: Oscillation and optics
  - Paper Code: APH 101/ APH 201
- Paper Title: Quantum and Statistical Physics
  - Paper Code: APH 103/ APH 203
- Paper Title: Physics of Materials
  - Paper Code: APH 207/ APH 107
SEMESTER I

Paper Title : Calculus
Paper Code : MATHS101
Pre Requisite : 10+2
Max (Univ. Exam) Marks : 50 Time of examination: 3hrs.
Internal Assessment : 50

Course Duration: 45 lectures of one hour each.

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Objectives

- To understand the behaviour of infinite series and its use.
- To learn the concepts of functions of two and more than two variables and their applications.
- To learn the methods to evaluate multiple integrals and their applications to various problems.
- To understand the concepts of Vector calculus and their use in engineering problems.

<td></td>
<td></td>
</tr>
</tbody>
</table>

**Outcomes**
- The students are able to test the behavior of infinite series.
- Ability to analyze functions of more than two variables and their applications.
- Ability to evaluate multiple integrals and apply them to practical problems.
- Ability to apply vector calculus to engineering problems

**References:**

Paper Title : Basic Biology (Theory)
PAPER CODE : BIO101
Course Duration: 45 lectures of one hour each.

Max (Univ. Exam) Marks : 50 Time of examination: 3hrs.

Internal Assessment : 50

Note: The semester question paper of a subject will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt at least two questions from each section.

Objective: To build on the foundation of biological aspects with emphasis on origin and propagation of various life forms and their constituent molecules.

Section A
Introduction to Biotechnology: definition, scope and future prospects (2)
Origin of Life: theories of evolution, chemical evolution, organic evolution, Oparin-Haldane hypothesis, Miller's experiment (4)
Cell structure and function: prokaryotic and eukaryotic cell (plant and animal cell), various cell organelles, their structure and functions (9)
Cell Division: stages of mitosis and meiosis (3)
Micro-organisms in Biotechnology: introduction to microorganisms, historical concept, beneficial and harmful micro-organisms and their applications (5)

Section B
Introduction to Bio-molecules: role of water in biological systems, types of bonds and interactive forces in bio-molecules, carbohydrates, proteins, lipids, nucleic acids, porphyrins and vitamins (13)
Introduction to enzymes: their classification and applications (3)
Applications of biotechnology: In agriculture, medical, food industry and bioremediation (6)

Books Recommended:

Paper Title : Basic Biology (Practical)

**Internal Assessment : 50**

1. To measure the pH of a solution
2. To prepare phosphate buffer solution
3. To test the presence of carbohydrates in a given sample by Molisch’s test/Anthrone test
4. To test the presence of proteins in a given sample by Ninhydrin test/Biuret test
5. Estimation of DNA in a given sample by diphenylamine reaction
6. Estimation of RNA in a given sample by orcinol method
7. Preparation and study of wet mounts of different microorganisms
Objective: To get basic knowledge of computers, its components and Operating systems and Linux Shell Commands. To acquire programming skills in C and basic knowledge of Object Oriented Programming.

PART A

1. Introduction: (8 hrs)
   Computer Basic, Block Diagram of Computer, Memory Hierarchy, Types of RAM, Secondary Memory Introduction to Operating Systems, Programming Languages, Program Structure, Linux Shell Commands, Bourne Shell, C Shell, Korn Shell

2. Basic Constructs of C: (8 hrs)
   Keywords, Identifiers, Variables, Symbolic Constants, Data Types and their storage, Operands, Arithmetic Operators, Relational Operators, Logical Operators, Bitwise Operators, Increment & Decrement Operators, Expressions, Conditional Expressions, Assignment Operators and Expressions, Type Conversions, Precedence and Order of Evaluation, External Variables and Scope of Variables. Basic Input Output, Formatted I/O.

3. Program Control Flow: (4 hrs)
   Statements and Blocks, Conditional Statements, IF, ELSE-IF, Switch Case statements, Control Loops, For, While and Do-While, Go to and Labels.

4. Arrays & Functions: (8 hrs)
   Pointers and Addresses, Arrays, Multi dimensional arrays, strings, pointer arrays, Functions, Function Prototyping. Scope of functions, Arguments, Call by value and call by references, static variables, recursion.

PART B

5. Structures: (4 hrs)
Structures, Array of Structures, pointer to structures, Typedef, Unions, Bit fields, passing structures as an argument to functions, C-Preprocessor and Macros, Command line arguments.

6. **Input and Output** (7 hrs)
Standard and Formatted Input and Output, File Access & its types, Line Input and Output, Types of Files, Binary & ASCII Files, Error handling, stderr and exit functions.

7. **Introduction to Object Oriented Programming** (6 hrs)
Classes and Objects, Structures vs Classes, Abstraction, Encapsulation, Polymorphism, Inheritance.

**Recommended Books:**

**Paper Title**: Computer Programming Practical
**Internal Assessment**: 50

**Instruction for Students**: The candidate will be attending a laboratory session of 2 hours weekly and students have to perform the practical related to the following list.

1. Introduction to UNIX Shells, C Shell, Bourne Shell, Korn Shell
2. Writing and compiling C Program in Linux.
3. Introduction to basic structure of C program, utility of header and library files.
4. Implementation of program related to the basic constructs in C
5. Program using different data types in C
6. Programs using Loops and Conditional Statements in C
7. Programs using arrays single dimension and multi dimensions in C.
8. Implementation of Matrices and their basic functions such as addition, subtraction, multiplication, inverse.
9. Programs using functions by passing values using call by value and call by reference method
10. Programs related to structures and unions
11. Program to implement array using pointers
12. Programs related to string handling in C
13. Program to manage I/O files
14. Introduction to classes and program related to basic use of classes showing their advantages over structures.
15. Any other program related to theory program to enhance the understanding of students in the subject.
Physics Course 1

Any one of the following three papers to be chosen by institute

Paper Title : Oscillations And Optics (Theory)
Paper Code : APH 101 / APH 201
Course Duration: 45 lectures of one hour each.

Max (Univ. Exam) Marks : 50 Time of examination: 3hrs.
Internal Assessment : 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

PART A

Ultrasonics: Production and detection of ultrasonics (2)

SHM: Review of SHM, superposition of two SHM in one dimension, charge oscillations in LC circuits (3)

Damped Oscillations: Concept and cause of damping, differential equation of a damped oscillator and different kinds of damping, Methods of describing damping of an oscillator - logarithmic decrement, relaxation time, quality factor, band width. Series LCR circuit as a damped oscillator. (3)

Forced Oscillations: States of forced oscillations, differential equation of forced oscillator – its displacement, velocity and impedance, behaviour of displacement and velocity with driver’s frequency, Power, bandwidth, Quality factor and amplification of forced oscillator, resonance in forced oscillators, forced oscillations in series LCR circuit (4)

Wave Motion: Wave equation and its solution, characteristic impedance of a string, reflection and transmission of waves on a string at a boundary, reflection and transmission of energy, the matching of impedances (3)

PART B

Interference: Division of wave front and amplitude; Fresnel’s biprism, Newton’s rings, Michelson interferometer and its applications for determination of \( \lambda \) and \( d\lambda \). (4)

Diffraction: Fresnel and Fraunhofer diffraction, qualitative changes in diffraction pattern on moving from single slit to double slit, plane transmission grating, dispersive power & resolving power of a grating. (5)

Polarization: Methods of polarization, analysis of polarized light, quarter and half wave plates, double refraction. (4)

Lasers: Elementary idea of LASER production, spontaneous emission, stimulated emission, Einstein’s coefficients, Helium-Neon, Ruby and semiconductor lasers, applications of lasers. (4)
**Fibre Optics:** Basics of optical fibre - its numerical aperture, coherent bundle, step index and graded index fibre, material dispersion, fibre Optics sensors, applications of optical fibre in communication systems. (3)

**Holography:** Basic principle, theory and requirements, applications (2)

**References:**

1. Physics for Engineers (Prentice Hall India) - N.K. Verma

3. Optics – Ajoy Ghatak

**Paper Title** : Oscillations and Optics Practical

**Internal Assessment**: 50

1. To study Lissajous figures obtained by superposition of oscillations with different frequencies and phases.
2. To find the wavelength of sodium light using Fresnel’s biprism.
3. (i) To determine the wavelength of He-Ne laser using transmission grating.
   (ii) To determine the slit width using the diffraction pattern.
4. To determine the wave length of sodium light by Newton’s rings method.
5. To determine the wave length of sodium light using a diffraction grating.
6. To find the specific rotation of sugar solution using a Bi-quartz Polarimeter.
7. To design a hollow prism and used it find the refractive index of a given liquid.
8. To determine the wavelength of laser using Michelson interferometer.
PART A

SPECIAL THEORY OF RELATIVITY

Inertial and non-inertial frames of reference, Galilean transformation, Michelson Morley Experiment, postulates of special theory of relativity, Lorentz transformation, Simultaneity, Length contraction, Time dilation, Doppler effect, Addition of velocities, variation of mass with velocity, mass-energy relation (7)

ORIGIN AND POSTULATES OF QUANTUM PHYSICS

Quantum theory of light, X-rays production, spectrum & diffraction (Bragg’s law), photoelectric effect, Compton effect, pair production, photons & gravity, black holes, de-Broglie hypothesis, particle diffraction, uncertainty principle and applications (7)

Postulates of quantum mechanics, Schrödinger theory, time-dependent and time-independent Schrödinger equation, wave function, Born interpretation and normalization, expectation values (3)

PART B

APPLICATIONS OF QUANTUM PHYSICS

Particle in a box (infinite potential well), finite potential step and barrier problems, tunneling, linear harmonic oscillator (one-dimensional) (4)

Hydrogen atom (qualitative), radiative transitions and selection rules, Zeeman effect, Spin-orbit coupling, electron spin, Stern-Gerlach experiment, exclusion principle, symmetric and antisymmetric wavefunctions (5)

STATISTICAL PHYSICS

References:

2. Solid State Physics, by C. Kittel (Wiley Eastern)
3. Solid State Physics, by S.O. Pillai (New Age International)

4. Statistical Physics and Thermodynamics by V.S. Bhatia

**Paper Title: Quantum And Statistical Physics (Practical)**

**Internal Assessment: 50**

1) To study the quantized energy level of the first excited state in the Argon using the Frank-Hertz setup.
2) To find the value of Planck’s constant and evaluate the work function of cathode material by used of photoelectric cell.
3) To study various characteristics of photo-voltaic cell: (a) Voltage-current characteristics, (b) loading characteristics, (c) power-resistance characteristics and (d) inverse square law behavior of the photo-current with distance of source of light from photo-voltaic cell.
4) To study the response of a photo-resistor to varying intensity of light falling on it and deduce spectral sensitivity of its semiconductor material.
5) To study the Balmer Series of Mercury and Hydrogen spectrum using diffraction grating and calculate Rydberg constant.
Paper Title: Physics of Materials  
Paper Code: APH207 / APH107  
Course Duration: 45 lectures of one hour each.

Max (Univ. Exam) Marks: 50  
Time of examination: 3hrs.

Internal Assessment: 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Part - A

Crystal structure: Bonding forces and energies, Primary and Secondary bonds, Space Lattices, Symmetries in a cubic lattice, Crystal Structures (cubic and hexagonal cells), Assignment of coordinates, directions and planes in crystals, Linear, Planar and Space densities in crystals, close packed morphology (Hexagonal and cubic close packing), single and polycrystalline structures, interstitial spaces (trigonal, tetrahedral and octahedral voids)

Structure of ceramics (NaCl, Zinc blende, silica and silicates, diamond crystal, Graphite, Fullerenes and carbon nanotubes)

Structure of polymers, crystallinity of long chain polymers

Crystal Structure analysis, X-ray diffraction and Bragg’s law, Powder method for study of X-ray diffraction pattern

Crystal Defects (Point, line, surface and volume imperfections)  
(14hrs)

Diffusion: Diffusion mechanisms, steady state diffusion, non-steady state diffusion, factors affecting diffusion, applications based on diffusion (corrosion resistance of Duralumin, carburization of steel, decarburization of steel, doping of semiconductors)  
(3hrs)

Elastic, Anelastic and Viscoelastic Behaviour: Elastic behaviour and its atomic model, rubber like elasticity, anelastic behaviour, relaxation processes, viscoelastic behaviour, spring-dashpot model  
(3hrs)

Part - B

Plastic Deformations and strengthening mechanisms: Tensile properties (Yield strength, Tensile Strength, Ductility, Resilience, Toughness), Dislocations and plastic deformation, characteristics of dislocations, slip systems, slip in single crystals, plastic deformation of polycrystalline materials, mechanisms of strengthening in metals (grain size reduction, solid-solution strengthening, strain hardening), recovery, recrystallization and grain growth  
(5hrs)

Fracture, Fatigue and Creep: Fracture (Ductile and brittle fractures), principles of fracture mechanics, fracture toughness, ductile to brittle transitions Cyclic stresses, S-N curve, crack initiation and propagation, factors that affect fatigue life, environmental effects, generalized creep behavior, stress and temperature effects.  
(5hrs)

Phase Diagrams: One-Component (or Unary) Phase Diagrams, Binary Isomorphous Systems, Interpretation of Phase Diagrams, Development of Microstructure in Isomorphous Alloys.

Phase Transformations: Kinetics of phase transformation, kinetics of solid state reactions, Isothermal transformation diagrams, continuous cooling transformation, temper embrittlement

References:

Paper Title: Physics of Materials (Practical)

Internal Assessment: 50

1. To find the energy band gap of the given semiconductor by four probe method.
2. To study the Hall Effect of a given semiconductor.
3. To determine the dielectric constant of the given materials.
4. To study the B-H curve of the ferromagnetic materials.
5. To determine the value of e/m for electron by long solenoid (helical) method.
6. To study the variation of magnetic field with distance along the axis of a circular coil carrying current by plotting a graph.
7. To find the Curie temperature of a Ferroelectric material by measuring Capacitance as a function of temperature.
8. To determine the thermal conductivity of an insulator material using guarded plate method (Lee's disc method).
9. To Study (a) Voltage-current characteristics (b) loading characteristics (c) Power-Resistance characteristics and (d) intensity response of photovoltaic cell.
Paper Title : Ethics and Self Awareness  
Paper Code : HSS101 / HSS201  
Max (Univ. Exam) Marks : 50  
Time of examination: 3hrs.

Internal Assessment : 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. **BOOKS**

8. Twain, Allan, “Self-Awareness”
Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

PART A

General (04)
Introduction, components of the environment, environmental degradation.

Ecology (04)
Elements of ecology: Ecological balance and consequences of change, principles of environmental impact assessment.

Air pollution and control (06)
Atmospheric composition, energy balance, climate, weather, dispersion, sources and effects of pollutants, primary and secondary pollutants, green house effect, depletion of ozone layer, standards and control measures.

PART B

Water pollution and control (06)
Hydrosphere, natural water, pollutants their origin and effects, river/lake/ground water pollution, standards and control.

Land Pollution (06)
Lithosphere, pollutants (municipal, industrial, commercial, agricultural, hazardous solid wastes): their origin and effects, collection and disposal of solid waste, recovery and conversion methods.

Noise Pollution (04)
Sources, effects, standards and control.

Books & References

SEMESTER II

Paper Title       : Differential Equations and Transforms
Paper Code        : MATHS201
Pre Requisite     : Calculus (MATHS101)

Course Duration: 45 lectures of one hour each.

Max (Univ. Exam) Marks : 50  Time of examination: 3hrs.
Internal Assessment : 50

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Objectives

• To learn the methods to formulate and solve linear differential equations and their applications to engineering problems
• To learn the concepts of Laplace transforms and to evaluate Laplace transforms and inverse Laplace transform
• To apply Laplace transforms to solve ordinary differential equations
• To learn the concept of Fourier series, integrals and transforms.
• To learn how to solve heat, wave and Laplace equations.

integrals. Unit step function, second shifting theorem, Dirac’s Delta function. Differentiation and integration of transforms. Convolution Theorem on Laplace Transforms. Application of Laplace transforms to solve ordinary differential equations with initial conditions (Scope as in Chapter 5, Sections 5.1 – 5.5 of Reference 1).

### PART B

| 3. | **Fourier Series and Transforms:** Periodic functions, Fourier series, Even and odd series, half range expansions, Complex Fourier Series, Approximation by trigonometric polynomials. Fourier integrals, Fourier Cosine and Sine transforms, Fourier Transforms (Scope as in Chapter 10, Sections 10.1 – 10.5, 10.7 – 10.10 of Reference 1). |
| 4. | **Partial Differential Equations:** Partial differential equations of first order, origin, solution of linear partial differential equations of first order, Integral surfaces passing through a given curve (Scope as in Chapter 2, Sections 1, 2, 4, 5 of Reference 4). |
| 5. | **Boundary Value Problems:** D’Alembert’s solution of wave equation, separation of variables: one dimension and two dimension heat and wave equation, Laplace equation in Cartesian and Polar coordinates (Scope as in Chapter 11, Sections 11.1, 11.3 – 11.5, 11.8 – 11.9 of Reference 1). |

#### Outcomes

1. The student will learn to solve Ordinary Differential equations.
2. The students will be able to apply the tools of Laplace Transforms to model engineering problems and solve the resulting differential equations.
3. Students will understand the nature and behavior of trigonometric (Fourier) series and apply it to solve boundary value problems.

5. **Advanced Techniques in Technical Writing** (04)
   Job Application, CV Writing, Business Letters, Memos, Minutes, Reports and Report Writing Strategies, E-mail Etiquette, Blog Writing, Instruction Manuals and Technical Proposals

**Practical Sessions**

1. Individual presentations with stress on delivery and content
2. Overcoming Stage Fright - Debates, extempore
3. How to discuss in a group - Group Discussion
4. Discussion on recent developments and current debates in the media
5. How to prepare for an Interview and face it with confidence
6. Conducting meeting and conferences
7. Exercises on Composition & Comprehension, Reading Improvement

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Objective: To impart the knowledge on basic concepts of general chemistry.

<tr>
<td><strong>PART B</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>4.</td>
<td>Chemistry of Hydrocarbons: House synthesis, halogenation of alkanes, free radical mechanism. Alkenes-catalytic hydrogenation, dehydration of alcohols, dehydrohalogenation, Saytzeff rule, electrophillic addition reactions, Markownikiff’s rule, peroxide effect, mechanism of allylic substitution. Acidity of 1-alkynes, conjugated dienes, 1,2-and 1,4-additions. Ring-opening reactions of cyclopropane and cyclobutane, Chemistry of benzene, aromatic electrophillic substitution reactions, Friedel-Crafts reactions.</td>
<td>8</td>
</tr>
<tr>
<td>5.</td>
<td>Chemistry of functional groups: Alkyl and aryl halides-nucleophilic substitution, synthetic utility of Grignard reagents, Alcohol-methods of formation by reduction of aldehydes, ketones, carboxylic acids and esters, phenols- acidity of phenol. Aldehydes and ketones- Synthesis of aldehydes from acid chlorides, synthesis of ketones from nitriles and carboxylic acids, Mechanism of nucleophilic additions to carbonyl group with particular emphasis on</td>
<td>10</td>
</tr>
</tbody>
</table>
benzoin and aldol condensations
Carboxylic acid- acidity of carboxylic acids, preparation of carboxylic acids, Hell-Volhard-Zelinsky reaction.

Amines- alkyl and aryl amines, basicity of amines.
Preparation of diazonium salts by reaction of amines with nitrous acid, synthetic utility of diazonium salts.

**Books Recommended**

**Practicals:**
Instruction for Students: The candidate will be attending a laboratory session of two hours weekly and has to perform any eight experiments.
1. Verify Lambert Beer’s law using spectrophotometer and CoCl₂ or K₂Cr₂O₇ solution.
2. To determine the strength of an acid solution by using conductivity meter.
3. Determination of saponification number of an oil.
4. Preparation of a phenol formaldehyde resin.
5. Experiments on TLC (determination of Rf values and identification of various compounds).
6. To determine the heat of a neutralization reaction.
7. To determine the heat of solution of given compound.
8. Determination of total hardness of a water sample.
10. Determination of chloride ion and dissolved O₂ in water.
11. Preparation of an inorganic complex/organic compound

**Books Recommended:**
### Course Objectives (CO):

Student will be able to:
1. Know different machines, tools and equipment, Identify different Engineering materials, metals and non-metals.
2. Understand different Mechanisms, Use of Machines, Tools and Equipment.

### Course Outcome:

This course is designed to help students achieve the following outcomes.

1. Familiarity with common machines, Tools and Equipment in basic Workshop Practices.
2. On hand basic workshop practices in Electronics, Electrical, Machine, Welding, Fitting, Sheet Metal, Smithy, Foundry and Carpentry Workshops in Engineering professions.
3. Applications of Basic Workshop Practices.

### SYLLABUS

Instruction for Students: The candidate will be attending a laboratory session of three hours weekly.

Practice of basic exercises related with different shops. On hand basic workshop practices in Electronics, Electrical, Machine, Welding, Fitting, Sheet Metal, Smithy, Foundry and Carpentry Workshops in Engineering professions.

Jobs:
- Butt Joint in Flat Position using SMAW.
- Lap Joint using Spot Welding
- Edge Joint in Horizontal Position using SMAW
- Tee Joint in Flat position using SMAW
- Corner Joint in vertical position using SMAW.
- Defect Identification and marking.
- Edge preparation and Fillet making, Tacking, Distortion identification

Electronics Workshop: To know about Soldering mechanism and techniques
- Familiarity with Electronic Components/symbols
- Testing of electronic components
- Application of Soldering: Circuit Assembly

List of Jobs:
Practice of Soldering and de-soldering
Identification and testing of a) passive electronic components b) Active electronic components
Assembly of Regulated Power supply circuit

Electrical Workshop:
Introduction of Various Electric wirings, Wiring Systems, Electrical wiring material and fitting,
different type of cables, Conduit pipe and its fitting, inspection points, switches of all types,
Distribution boards, M.C.B’s etc.
Electric Shock and its management.
Electric Tools: Conversance with various tools and to carry out the following:
   a) Measurement of wire sizes using SWG and micrometer
   b) Identification of Phase and neutral in single phase supply

Jobs:
To control a lamp with a single way switch
To control a lamp from two different places
To assemble a fluorescent lamp with its accessories
To control a lamp, fan and a three pin socket in parallel connection with single way switches

Fitting Shop:
Introduction of Fitting, different type of operations, Tools, materials, precision instruments like
Vernier caliper and Micrometer etc,
Safety precautions and Practical demonstration of tools and equipments

Jobs: To make a a square from MS Flat, Punching, Cutting, Filling techniques and practice,
Tapping, Counter Drilling

Smithy Workshop:
Introduction of Smithy and Forging process, Tools and Equipment’s, Operations, Heat Treatment
processes, Advantages, Dis-advantages, Defects and Safety precautions.
Jobs: Drawing and Upsetting Practice using Open Hearth Furnace.
Cold working process practice
Heat Treatment \: Annealing and hardening process

Machine Shop : Application, Function and different parts, Operations of Lathe, Type of Cutting
Tools and their materials, Drill machine Types, applications and Functions. Hacksaw machines
and functions, Work Holding devices and tools, chucks, Vices, machine Vices, V Block, Measuring
Instruments uses, Shaper and Milling machine Applications.
Jobs: To perform Marking, Facing, Turning,taper Turing, Grooving, Knurling, parting, Drilling,
Reaming operations on lathe machine,
Hacksawing practice on Power hacksaw,
Shaping operation practice on Shaper

Carpentry Shop:Classification of Tree, Timber. Advantages and uses of Timber, Seasoning of
Wood, Tools Used, Defects and Prevention of Wood,

Jobs:
Tee Joint
Cross Joint
Tenon Joint,
L Shape Joint
Practice of Wood Working Lathe
Practice on multi-purpose Planer
Foundry Shop: Introduction to Foundry, Advantages and Disadvantages of castings process, Introduction to pattern and various hand tools, Ingredients of Green sands, Various Hand Molding processes, Introduction to Casting Defects,

Jobs: Identification and uses of hand tools, Preparation of Green sand in Muller, Preparation of Sand Mould of Single piece solid pattern, Split pattern, Preparation of Green sand Core, casting of a Mould and study its defects.

Objective: To make students understand the basic morphological and physiological aspects of biological systems. To introduce the students with the biotechnological aspects for product development for societal benefit.

Section A

Types of Animal Tissues: basic structure and function of epithelial tissue, connective tissue, muscular tissue and nervous tissue (6)

Biological Systems: outlines of the major biological systems – digestive, circulatory, nervous, endocrine, and reproductive system (12)

Basic Genetics: concept of gene and allele, Mendelian and non Mendelian inheritance (5)

Section B

Introduction to biopolymers and synthetic polymers and their applications: Types of biopolymers and synthetic polymers, their application as implant material and in tissue engineering. (7)

Introduction to Genetic Engineering: basic concepts, tools and applications (7)

Introduction to biosafety, bioethics and IPR in biotechnology: concept of biosafety, need and application of biosafety in laboratories and industries, international and national norms regarding biosafety, GLP, GMP, bio-medical wastes, transportation of biological materials (8)

Books Recommended:
Paper Title       : Fundamentals of Biotechnology and Bioengineering (Theory)
Paper Code : BIO 202
Max (Univ. Exam) Marks : 50                        Time of examination: 3hrs.
Internal Assessment : 50
Course Duration: 45 lectures of one hour each with four lectures per week.

Note: The semester question paper of a subject will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt at least two questions from each section.

Objective: To introduce students to the engineering aspect applicable to biological systems for their efficient utilization for product development and make them aware of tools available to achieve the same.

Section A

Introduction to Engineering Calculations: System of units, conversion of units, dimensional consistency, scientific notations, mole concept, mixtures and solutions (4)

Basic Tools in Biotechnology: types and principles of spectrophotometer, pH meter, autoclave, incubator, lyophilizer, microscope (10)

Introduction to separation techniques in biotechnology: centrifugation, electrophoresis, chromatography (7)

Introduction to radioactivity: types of radionuclides and their applications (2)

Section B

Concepts in Bioengineering and Bioinstrumentation: biosensors-concept and construction, bioreactors-design and operation, biomedical instruments-construction and applications of ECG, EEG, MRI, ultrasound (12)

Application of Computers to Biology: concepts of bioinformatics, types of databases, biochips (6)

Introduction of nano-bioengineering: Introduction of nano-biotechnology and biological systems at nanoscale, applications of nano-biotechnology in medicine and healthcare (4)

Books Recommended:

**Paper Title**: Fundamentals of Biotechnology and Bioengineering (Practical)

**Internal Assessment**: 50

1. To verify the validity of Beer Lambert law using a spectrophotometer
2. To prepare the standard curve of Bovine Serum Albumin (BSA)
3. To observe epithelial tissue under a microscope
4. To study the working and components of a CO\textsubscript{2} incubator
5. To study the working and components of an autoclave
6. Acquaintance to NCBI database
7. To learn the preparation of glycerol stocks
8. Case study of $Bt$ cotton
